1. Precaution

To avoid possible damage, electric shocks or exposure to radiation, follow the instructions below with regard to safety, installation, service and ESD.

1-1 Safety Precautions

- Make sure all protective devices are properly installed including non-metallic handles and compartment covers when installing or re-installing the chassis or chassis assemblies.
- Make sure that no gaps exist between the cabinets for children to insert their fingers in to prevent children from receiving electric shocks. Gaps mentioned above include ventilation holes between the PDP module and the cabinet mask, and the improper installation of the rear cabinet.

Errors may occur when the resistance is below 1.0 $^{\text{M}\Omega}$ or over 5.2 $^{\text{M}\Omega}.$

In these cases, make sure that the device is repaired before sending it back to the customer.

Check for Electricity Leakage (Figure 1-1)
Warning: Do not use an insulated transformer for checking the leakage. Use only those current leakage testers or mirroring systems that comply with ANSIC 101.1 and the Underwriter Laboratory's specifications (UL1410, 59.7).

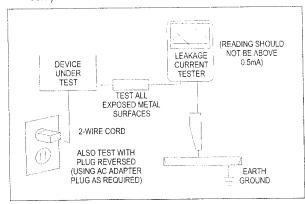

Fig. 1-1 AC Leakage Test

 A high voltage is maintained within the specified limits using safety parts, calibration and tolerances. When voltage exceeds the specified limits, check each special part.

- 5. Warning for Engineering Changes: Never make any changes or additions to the circuit design or the internal part for this product. Ex: Do not add any audio or video accessory connectors. This might cause physical damage. Furthermore, any changes or additions to the original design/engineering will invalidate the warranty.
- 6. Warning Hot Chassis: Some TV chassis are directly connected to one end of the AC power cord for electrical reasons. Without insulated transformers, the product can only be repaired safely when the chassis is connected to the earth end of the AC power source.

To make sure the AC power cord is properly connected, follow the instructions below. Use the voltmeter to measure the voltage between the chassis and the earth ground. If the measurement is over 1.0V, unplug the AC power cord and change the polarity before reinserting it. Measure the voltage between the chassis and the ground again.

- Some TV chassis are shipped with an additional secondary grounding system. The secondary system is adjacent to the AC power line. These two grounding systems are separated in the circuit using an unbreakable/unchangeable insulation material.
- When any parts, material or wiring appear overheated or damaged, replace them with new immediately. When any damage or overheating is detected, correct this immediately and make a regular check of possible errors.
- 9. Check for the original shape of the lead, especially that of the antenna wiring, any sharp edges, the AC power and the high voltage power. Carefully check if the wiring is too tight, incorrectly placed or loose. Never change the space between the part and the printed circuit board. Check the AC power cord for possible damages. Keep the part or the lead away from any heat-emitting materials.

Precaution

10. Safety Indication:

Some electrical circuits or device related materials require special attention to their safety features, which cannot be viewed by the naked eye. If an original part is replaced with another irregular one, the safety or protective features will be lost even if the new one has a higher voltage or more watts.

Critical safety parts should be bracketed with (\(\hat{\Lambda} \) \(\hat{\Lambda} \)). Use only regular parts for replacements (in particular, flame resistance and dielectric strength specifications). Irregular parts or materials may cause electric shock or fire.

1-2 Servicing Precautions

Warning 1: First carefully read the "Safety Instruction" in this service manual.

When there is a conflict between the service and the safety instructions, follow the safety instruction at all times.

Warning 2: Any electrolytic capacitor with the wrong polarity will explode.

- 1. The service instructions are printed on the cabinet, and should be followed by any service personnel.
- 2. Make sure to unplug the AC power cord from the power source before starting any repairs.
 - (a) Remove or re-install parts or assemblies.
 - (b) Disconnect the electric plug or connector, if any.
 - (c) Connect the test part in parallel with the electrolytic capacitor.
- Some parts are placed at a higher position than the printed board. Insulated tubes or tapes are used for this purpose. The internal wiring is clamped using buckles to avoid contact with heat emitting parts. These parts are installed back to their original position.
- 4. After the repair, make sure to check if the screws, parts or cables are properly installed. Make sure no damage is caused to the repaired part and its surroundings.
- 5. Check for insulation between the blade of the AC plug and that of any conductive materials (i.e. the metal panel, input terminal, earphone jack, etc).
- Insulation Check Process: Unplug the power cord from the AC source and turn the switch on. Connect the insulating resistance meter (500v) to the AC plug blade.

The insulating resistance between the blade of the AC plug and that of the conductive material should be more than $1 \, \text{M}\Omega$.

- Any B+ interlock should not be damaged.
 If the metal heat sink is not properly installed, no connection to the AC power should be made.
- Make sure the grounding lead of the tester is connected to the chassis ground before connecting to the positive lead. The ground lead of the tester should be removed last.
- 9. Beware of risks of any current leakage coming into contact with the high-capacity capacitor.
- The sharp edges of the metal material may cause physical damage, so protect yourself by wearing gloves during the repair.
- 11. Due to the nature of plasma display panels, partial afterimages may appear if a still picture is displayed on the screen for a long period of time.

This is caused by brightness deterioration due to the storage effect of the panel, and to prevent this from happening, we recommend that the brightness and contrast are reduced.

(e.g.) Contrast: 25, Brightness: 50

Samsung Electronics 1-3

1-3 Static Electricity Precautions

- Some semi-conductive ("solid state") devices are vulnerable to static electricity. These devices are known as ESD. ESD includes the integrated circuit and the field effect transistor. To avoid any materials damage from electrostatic shock, follow the instructions described below.
- Remove any static electricity from your body by connecting the earth ground before handling any semi-conductive parts or assemblies. Alternatively, wear a dischargeable wrist-belt.
 (Make sure to remove any static electricity before connecting the power source - this is a safety instruction for avoiding electric shock)
- Remove the ESD assembly and place it on a conductive surface such as aluminum foil to prevent accumulating static electricity.
- 4. Do not use any Freon-based chemicals.
 Such chemicals will generate static electricity that causes damage to the ESD.
- 5. Use only grounded-tip irons for soldering purposes.

- Use only anti-static solder removal devices.
 Most solder removal devices do not support an
 anti-static feature. A solder removal device without an
 anti-static feature can store enough static electricity to
 cause damage to the ESD.
- 7. Do not remove the ESD from the protective box until the replacement is ready. Most ESD replacements are covered with lead, which will cause a short to the entire unit due to the conductive foam, aluminum foil or other conductive materials.
- Remove the protective material from the ESD replacement lead immediately after connecting it to the chassis or circuit assembly.
- Take extreme caution in handling any uncovered ESD replacements. Actions such as brushing clothes or lifting your leg from the carpet floor can generate enough static electricity to damage the ESD.

CAUTION

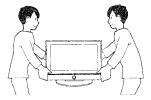

These servicing instructions are for use by qualified service personnel only.

To reduce the risk of electric shock do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so.

1-5

1-4 Installation Precautions

 For safety reasons, more than two people are required for carrying the product.

- Keep the power cord away from any heat emitting devices, as a melted covering may cause fire or electric shock.
- 3. Do not place the product in areas with poor ventilation such as a bookshelf or closet. The increased internal temperature may cause fire.
- Bend the external antenna cable when connecting it to the product. This is a measure to protect it from being exposed to moisture. Otherwise, it may cause a fire or electric shock.
- Make sure to turn the power off and unplug the power cord from the outlet before repositioning the product.
 Also check the antenna cable or the external connectors if they are fully unplugged. Damage to the cord may cause fire or electric shock.

- Keep the antenna far away from any high-voltage cables and install it firmly. Contact with the high-voltage cable or the antenna falling over may cause fire or electric shock.
- When connecting the RF antenna, check for a DTV receiving system and install a separate DTV reception antenna for areas with no DTV signal.
- When installing the product, leave enough space (4") between the product and the wall for ventilation purposes.
 A rise in temperature within the product may cause fire.
- When moving a PDP with removable speakers, detach
 the speakers first before moving the main body.
 Moving the PDP main body without separating the
 speakers may cause the speakers to detach, possibly
 causing damage or injury.

3. Disassembly & Reassembly

3-1 Overall Disassembly & Reassembly

∧ Notice

- Be sure to separate the power cord before disassembling the unit.
- Discharge the capacitors first when separating PCB's with high capacity capacitors such as SMPS, X Main Board, Y Main Board, etc. (A spark may be generated by the electric charge, and there is danger of electronic shock.)
- Check that the cables are properly connected referring to the circuit diagram when disassembling or assembling the unit taking care not to damage the cables.
- Take care not to scratch the Glass Filter in the front.
- Assemble the boards in the reverse order of the disassembly.
- The plasma must be layed down on a flat padded surface for disassembly and reassembly.

3-1-1 Separation of ASSY COVER P-REAR

Part Name	Description	Description Photo
Cover Rear	① Remove 4 screws. () : M8,L16,ZPC(BLK),SWRCH18A,WP	
	② Remove 15 screws. () : BH,+,B,M4,L3,ZPC(BLK)	
	③ Remove 4 screws. (〇) : PH,+,WSP,S,M4,L35,ZPC(BLK)	
	④ Remove the 2 Hex nuts for the PC input. (□) : #4-40,L6,NI PLT,C3601,-	
	⑤ Remove the Cover Rear.	
	⚠: Please lay the PDP unit face down on a soft surface when removing the stand.	

3-1-2 Separation of ASSY PCB MISC-MAIN

Part Name	Description	Description Photo
Main Board	Detach all connectors from the Main Board. Remove 4 screws. : PH,+,WWP,M3,L8,NI PLT	
	③ Remove the Main Board.

	③ Remove the Side AV.	चांच र र वि

Samsung Electronics 3-3

3-1-7 Separation of ASSY BRACKET P-WALL

Part Name	Description	Description Photo
42" Wall Bracket	 Remove 2 screws. (○) : BH,+,B,M4,L3,ZPC(BLK) Remove 6 screws. (○) : BH,+,S,M4,L10,ZPC(BLK) Remove Wall Bracket. ∴ Please lay the PDP panel face down on a soft surface when separating front cover. 	
50" Wall Bracket	 Remove 2 screws. (○) : BH,+,B,M4,L3,ZPC(BLK) Remove 6 screws. (○) : BH,+,S,M4,L10,ZPC(BLK) Remove Wall Bracket. Please lay the PDP panel face down on a soft surface when separating front cover. 	

3-1-8 Separation of ASSY SPEAKER P

Part Name	Description	Description Photo
42" Speaker	Remove 4 screws. BH,+,WP,B,M4.0,L3,ZPC(BLK), SWRCH18A Remove the Speaker.	
50" Speaker	Remove 4 screws. BH,+,WP,B,M4.0,L3,ZPC(BLK), SWRCH18A Remove the Speaker.	

3-1-9 Separation of ASSY BOARD P-POWER&IR

Part Name	Description	Description Photo	
Power & IR Board	① Detach all connectors from the Power&IR Board.		
	② Remove the Power&IR PCB unlocking the 2 holders.		

Samsung Electronics 3-5

3-1-10 Separation of SMPS-PDP TV

Part Name	Description	Description Photo	
42" SMPS	① Detach all connectors from the SMPS.	35 CO (547-L)	
	② Remove 8 screws. : PH,+,WWP,M3,L8,NI PLT		
	③ Remove the SMPS.		
	∴: Wear gloves when handling the power board as there may be some remaining electrical charge in the capacitor. Specifically, avoid touching any part of the capacitor.		
50" SMPS	① Detach all connectors from the SMPS.		
	② Remove 8 screws. : PH,+,WWP,M3,L8,NI PLT		
	③ Remove the SMPS.		
	△: Wear gloves when handling the power board as there may be some remaining		
	electrical charge in the capacitor. Specifically, avoid touching any part of the capacitor.		

3-6 Samsung Electronics

3-1-11 Separation of ASSY PDP MODULE P-LOGIC MAIN BOARD

Part Name	Description	Description Photo
42" Logic Board	 Detach all connectors from the Logic Main Board. Remove 4 screws. WSP,PH,+,M3,L8,NI PLT Remove the Logic Main Board. 	
50" Logic Board	Detach all connectors from the Logic Main Board. Remove 4 screws. : WSP,PH,+,M3,L8,NI PLT Remove the Logic Main Board.	

Samsung Electronics 3-7

3-1-12 Separation of ASSY PDP MODULE P-X MAIN BOARD

Part Name	Description	Description Photo
Flat Cable	 Detach all Connectors from the X Main Board. To separate the Flat Cable of the X-Board, press the upper and the lower sides of the connector. 	
42" X-Main Board	Remove 4 screws. PH,+,WWP,M3,L8,NI PLT Remove the X-Main Board.	
50" X-Main Board	Remove 4 screws. : PH,+,WWP,M3,L8,NI PLT Remove the X-Main Board.	

3-8 Samsung Electronics

3-1-13 Separation of ASSY PDP MODULE P-Y MAIN BOARD

Part Name	Description Description	Description Photo
Flat Cable	① Detach the 6 scan board connectors from the panel by pulling the holder from both the top and bottom ends.	
42" Y-Scan	① Remove 3 screws. : PH,+,WWP,M3,L8,NI PLT	
Board	1) Dameyo F caraya	
Y-Scan Board	① Remove 5 screws. : PH,+,WWP,M3,L8,NI PLT

4. Troubleshooting

4-1 Troubleshooting

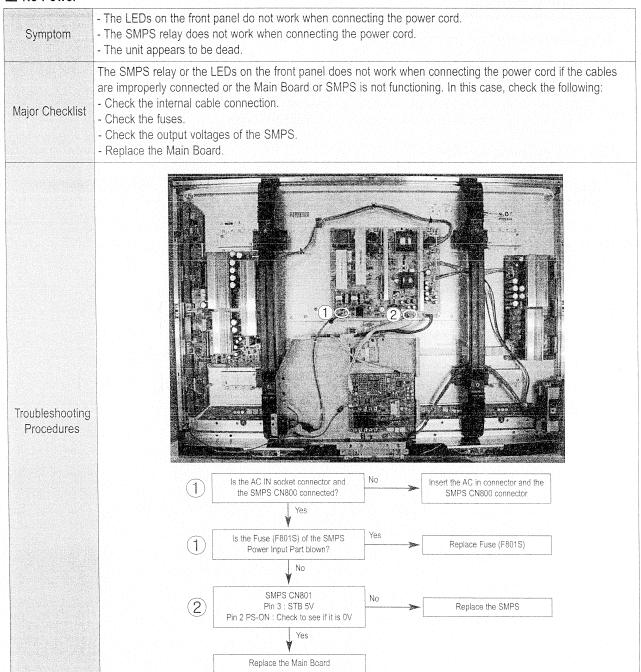

4-1-1 First Checklist for Troubleshooting

- 1. Check the various cable connections first.
 - Check to see if there is a burnt or damaged cable.
 - Check to see if there is a disconnected or loose cable connection.
 - Check to see if the cables are connected according to the connection diagram.
- 2. Check the power input to the Main Board.
- 3. Check the voltage in and out between the SMPS \leftrightarrow Main Board, between the SMPS \leftrightarrow X, Y Main Board, and between the Logic Boards.

Samsung Electronics 4-1

■ Drive Board Troubleshooting

1) Troubleshooting Summary

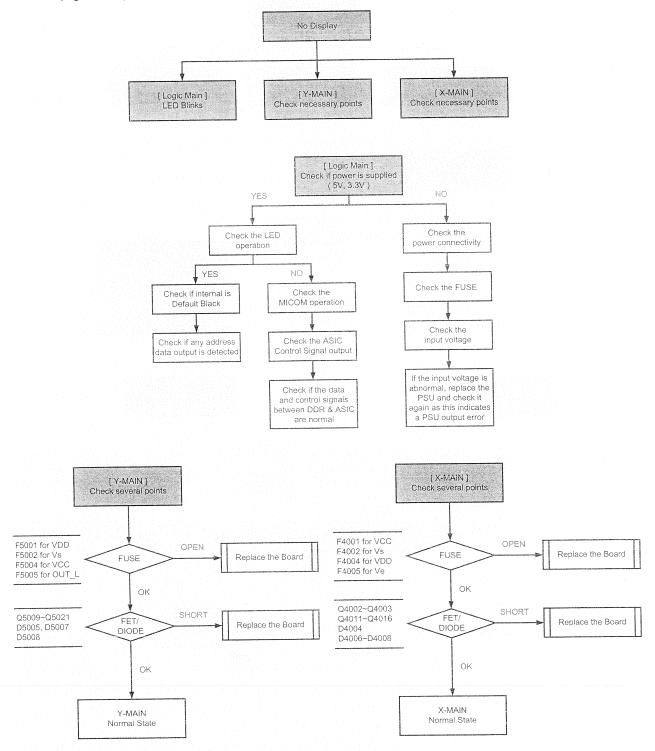

Condition Name	Description	Related Board
No Voltage Output	Operating Voltage don't exist	PSU
No Display	Operating Voltage exist, but an Image doesn't exist on screen	Y-MAIN, X-MAIN, Logic Main, Cable
Abnormal Display	Abnormal Image (not open or short) is no screen	Y-MAIN, X-MAIN, Logic Main
Sustain Open	Some horizontal lines don't exist on screen	Scan Buffer, FPC of X/Y
Sustain Short	Some horizontal lines appear to be linked on screen	Scan Buffer, FPC of X/Y
Address Open	Some vertical lines don't exist on screen	Logic Main, Logic Buffer, TCP
Address Short	Some vertical lines appear to be linked on screen	Logic Main, Logic Buffer, TCP

4-8 Samsung Electronics

2) Troubleshooting Procedure in Abnormal Conditions

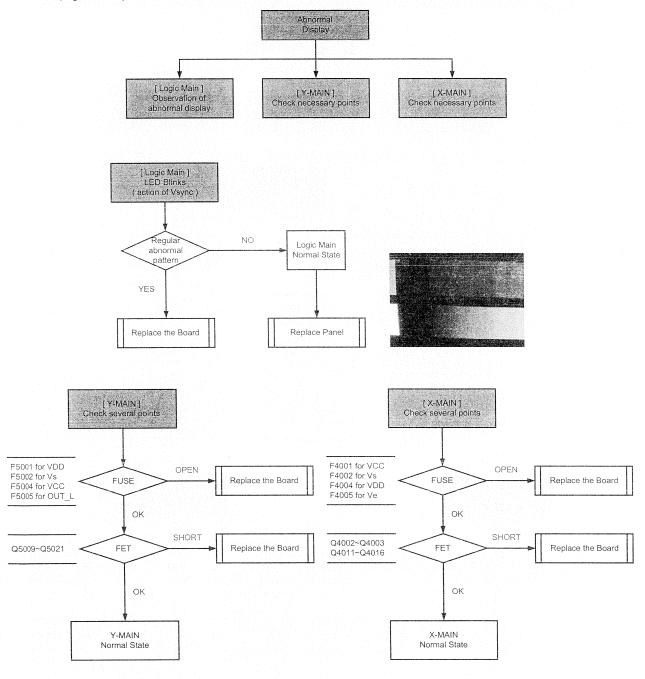

1 No Display

No Display is related with Y-MAIN, X-MAIN, Logic Main and so on. This page shows you how to check the boards, and the following pages show you how to find the defective board.

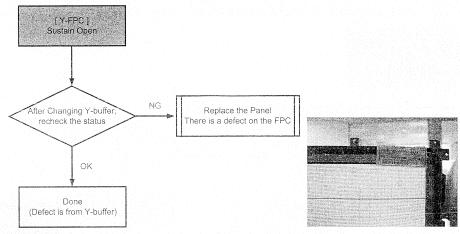

- ② Abnormal Display(Abnormal Image is on Screen.(except abnormality in Sustain or Address))
 - Abnormal Display is related with Y-MAIN, X-MAIN, Logic Main and so on.

 This page shows you how to check the boards, and the following pages show you how to find the defective board.

3 Sustain Open (some horizontal lines don't exist on screen)

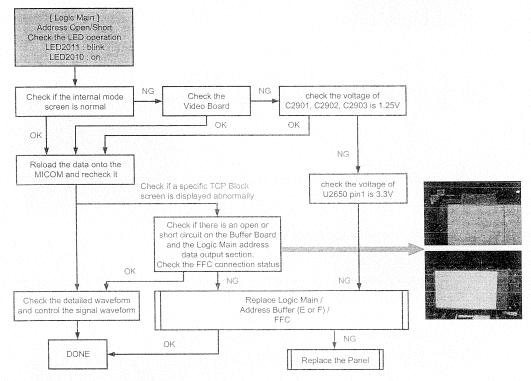

④ Sustain Short (some horizontal lines appear to be linked on Video)

5 Address Open, Short

Address Open and Short is related with Logic Main, Logic Buffer, FFC, TCP film and so on.

This page shows you how to check the boards, and the following pages show you how to find the defective board.

4-1-3 Faults and Corrective Actions

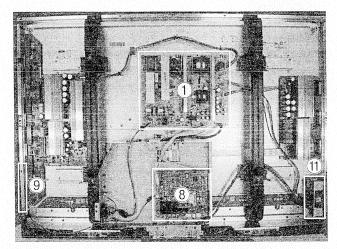

Symptom	Related Image	Causes and Countermeasures		
A blank vertical cell (block) appears on the screen.		Address buffer defect - Replace the corresponding upper/low-buffers (E, F) COF defect (burnt) - Replace the module		
A green screen appears when the TV is turned on.		The Scale is not reseting - Replace the Main board		
The OSD box appears but there is no text.		Incorrect program version - Check the version of each program - Replace the Main board		
A blank upper (or lower) block appears on the screen.	inem.	Upper/Lower Y Buffer defect - Replace the corresponding upper/lower buffers (E, F)		

Symptom	Related Image	Causes and Countermeasures
Either the main or sub picture does not appear.	10 10 10 10 10 10 10 10 10 10 10 10 10 1	Replace the Main board
A vertical green line appears on the screen.	MOST STATE	The SMPS voltage is incorrect - Adjust the SMPS voltage according to the voltage printed on the module label
Dim screen (blurred in red)		X-Main board defect - Replace the X-Main board
A biank screen appears		- Replace the Y-Main board

4-14 Samsung Electronics

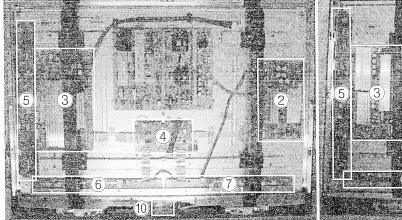

4-1-4 Troubleshooting Procedures by assembly

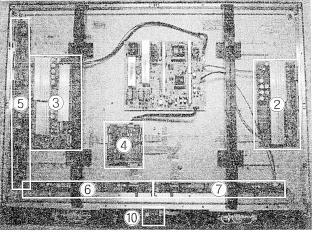

No	Assembly	Major Symptoms
1	SMPS-PDP TV	No power, Blank screen, the Relay repeats On and Off.
2	ASSY PDP MODULE P-X-MAIN	Blank screen
3	ASSY PDP MODULE P-Y-MAIN	Blank screen
4	ASSY PDP MODULE P-LOGIC MAIN	Blank screen, Screen noise
5	ASSY PDP MODULE P-Y-MAIN SCAN BUFFER	Row Bar screen is blank
6	ASSY PDP MODULE P-ADDRESS E BUFFER	Corresponding Buffer Board block screen is blank.
7	ASSY PDP MODULE P-ADDRESS F BUFFER	Corresponding Buffer Board block screen is blank.
8	ASSY PCB MISC-MAIN	No Power, Abnormal screen for each input source, PIP screen trouble, Sound trouble
9	ASSY BOARD P-FUNCTION	The side function key does not work properly
10	ASSY BOARD P-POWER&IR	The remote control does not work properly, the LED does not work properly.
11	ASSY BOARD P-SIDE AV	The AV2 and S-VIDEO2 modes do not work properly

4-2-1 Service Instruction

- Before Performing After Sales Services
 - 1. Check if the measurement and test equipment is working properly.
 - 2. Secure sufficient work space for disassembling the product.
 - 3. Prepare a soft pad for disassembling the product.
- Service adjustment item after replacement of Board
- <If adjustment equipment is available>
- ① PDP Option of Factory Mode → set the Factory Data Type item as the suitable value of relevant model.
- ② Adjust Calibration of Factory Mode for each mode.
- 3 Adjust White Balance of Factory Mode.
- <If adjustment equipment is not available>
- ① Write down the value of HDMI White Balance of Factory Mode before replacing Board.
- (3) Set the value of HDMI White Balance with the value written down before.

4-16 Samsung Electronics

4-2-2 How to Access Service Mode

1. General Remote

To Enter: POWER OFF → INFO → MENU → MUTE → POWER ON

(Interval between key strokes: less than 3 sec)

To Exit: POWER OFF → POWER ON

2. Factory Remote

To Enter: POWER ON → INFO → FACTORY Key (Interval between key strokes: less than 3 sec)

To Exit: POWER OFF → POWER ON

Press the Factory key twice with a key stroke interval of more than 1 second (Pressing once enters Aging Mode)

- 3. Settings when entering Factory mode
 - Sharp Screen (Dynamic), Color Tone (Cool1), Factory (Dynamic CE Off)
- 4. Adjustment Procedures
 - Channel ▲ ▼ Key : Select an item.
 - Volume ◀ ► Key : Adjust the value up or down.
 - MENU Key : Save the changes to the EEPROM and return to the higher-level mode.
 - Using the Numeric (0~9) keys, you can select a channel.
 - Using the SOURCE key, you can switch AV modes.
- 5. Initial SERVICE MODE DISPLAY State
- 11 Bus Stop 1 Calibration 12 Password 80 80 80 80 2 Option Byte XXXXXX XXXXXX 13 CheckSum 3 W/B 14 Dynamic Contrast 4 W/B Movie 15 Spread Spectrum 5 MTK 8202 16 Reset 6 FBE2 option 7 Pdp Logic 8 SOUND 9 YC Delay 10 Adjust HDCP Write Success.. 16. Reset

4-2-4 Service Adjustment

White Balance - Calibration

If picture color is wrong, do calibration first.

Execute calibration in Factory Mode

1. Source

: VIDEO

2. Setting Mode : PAL Video (MODE : #2)

3. Pattern

: Pattern #24 (Chess Pattern)

4. Use Equipment: MSPG945 Series or MSPG925 Series

5. Work order

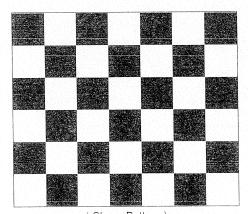

1) Enter by Factory Mode select "1. CALIBRATION".

2) Select "AV CALIBRATION" again in CALIBRATION MENU.

3) After Completing Calibration, come out "Av success". OSD on the screen (bottom-side) for about 3 seconds.

Source AV: PAL composite, Component: 1280*720/60Hz(720P)

PC: 42" - 1024*768/60Hz 50" - 1360*768/60Hz

(Chess Pattern)

White Balance - Adjustment

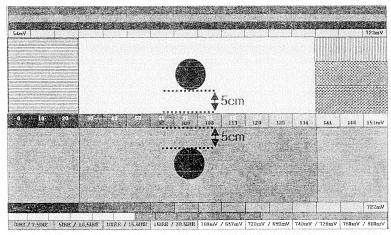

If picture color is wrong, check White Balance condition.

Equipment : CA210, Patten : Toshiba

Adjust W/B in Factory Mode

Sub brightness and R/G/B Offset controls low light region Sub contrast and R/G/B Gain controls high light region Source AV: PAL composite, Component: 1280*720/60Hz,

HDMI[DVI]: 1280*720/60Hz

(SAMSUNG WHITE BALANCE Adjustment PATTERN with FPD)

[Test Pattern : MSPG-945 Series Pattern #16]

 * Color temperature 1500K \pm 500, -6 ~-20 MPCD

* Color coordinate

H/L: $278/285 \pm 2$ L/L: $278/285 \pm 3$, 1.9ft ± 0.05 ft (This Data will be able to be changed according to Picture quality Setting, Please refer to latest data from Factory.)

Conditions for Measurement

1. On the basis of toshiba ABL pattern: High Light level (57 IRE)

- INPUT SIGNAL GENERATOR : MSPG-925SM or MSPG-945FS

* MODE No 2: 744*484@60Hz

No 6: 1280*720@60Hz(720P)

No 21: 1024*768

* Pattern No 36 : 16 Color Pattern

No 16 : Toshiba ABL Pattern No 24 : Chessboard Calibration

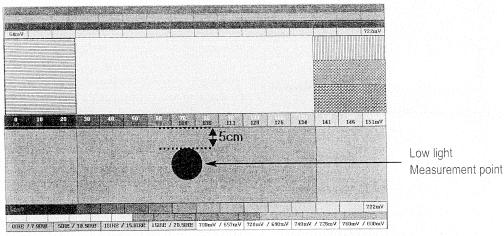

No 92 : Flat W/B Pattern

2. Optical measuring device: CA210 (FL)

Please use the MSPG Series LTH generator for model PS-42C91H, PS-50C91H.

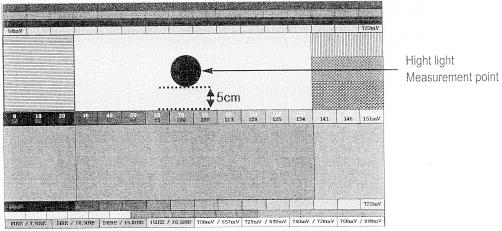

Method of Adjustment

- 1. Adjust the white balance of AV, Component and DVI Modes.
 - (AV → Component)
 - a) Set the input to the mode in which the adjustment will be made (RF \rightarrow DTV \rightarrow PC \rightarrow DVI).
 - * Input signal VIDEO Mode: Model #2 (744*484 Mode), Pattern #92
 - DTV, DVI Mode: Model #6 (1280*720 Mode), Pattern #92
 - HDMI Mode: Model #6 (1280*720 Mode), Pattern #92
 - b) Enter factory color control, confirm the data.
 - c) Adjust the low light. (Refer to table 1, 2 in adjustment position by mode)
 - Adjust sub Brightness to set the 'Y' value.
 - Adjust red offset ('x') and blue offset ('y') to the color coordinates.

(SAMSUNG WHITE BALANCE Adjustment PATTERN with FPD)

- * Do not adjust green offset data.
- d) Adjust the high light. (Refer to table 1, 2 in adjustment position by mode)
 - Adjust red gain ('x') and blue gain ('y') to the color coordinates.

(SAMSUNG WHITE BALANCE Adjustment PATTERN with FPD)

^{*} Do not adjust the green gain and sub-contrast (Y) data.

4-3-1 How to Update Flash ROM (with RS-232C Cable)

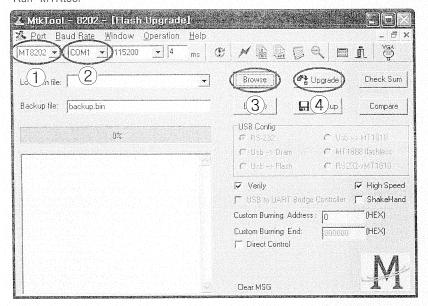

1. Install the MTKtool

Connect Set (Service Jack) and Jig Cable to execute Program Update.

Check In factory menu

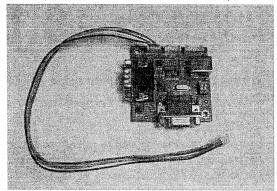

- 2. Option Byte \rightarrow "Logic D/L" should be "OFF" "Uart Select" should be "Debug D/L"
- 2. Turn on the Set (or on Stand by mode)
- Run "MTKtool"

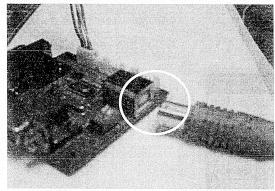

- Click Reset **G**
- Choose MT8202 ①
- Select Com Port 2 (Auto Detect)
- Select Bin file, by browse ③
- Click Upgrade button 4
- 3. Turn off (= AC Power off) the Set (waiting a few seconds) and turn on again.

4-3-2 How to Update Flash ROM (with UART JIG)

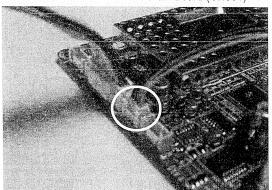

- 1. If some problems occur under this condition, update S/W by using UART JIG.

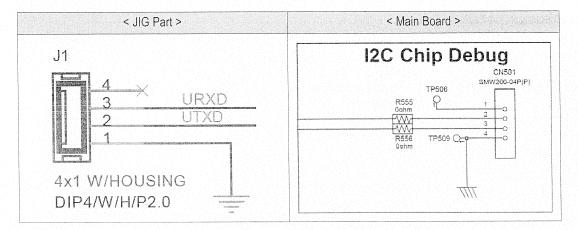

2. You can use UART JIG with USB Connection.

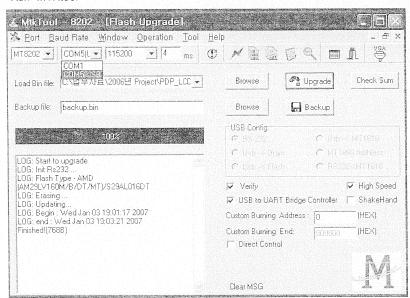

3. Install PL-2303 Driver Installer in your PC before using the JIG. Connect 4P Lead connector to Main Board (CN501)

4-3-3 Pin Assignment

- 1. Turn on the Set (or on Stand by mode)
 - Run "MTKtool"

2. When you run "MTKtool", this Program can detect USB port automatically. Choose USB interface and Update S/W as RS-232C case.

4-3-4 How to Check the Version of the Program

Procedures for checking in the Factory Menu.

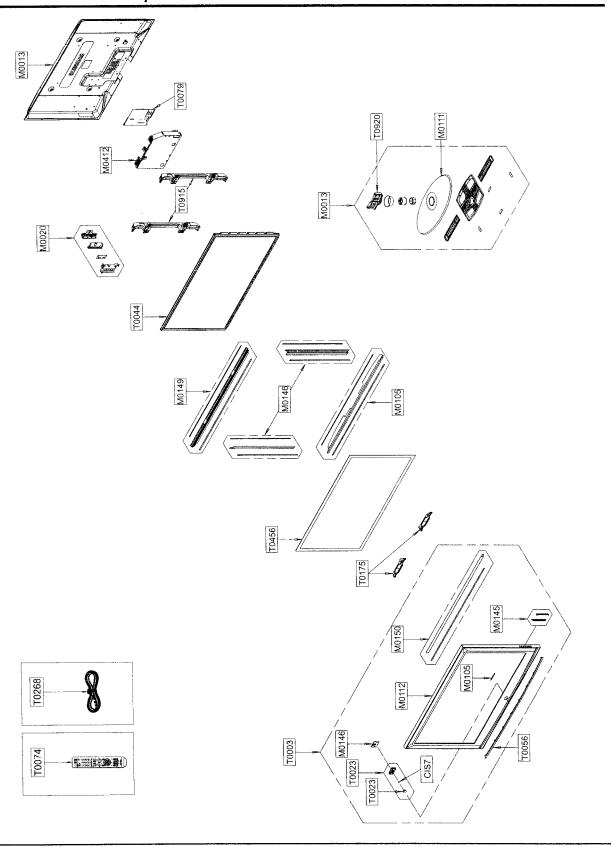

When entering Factory Mode, the version of the software is displayed at the bottom of the menu as described on page 4-17.

11 Bus Stop 1 Calibration 12 Password 80 80 80 80 2 Option Byte XXXXXX XXXXXX 13 CheckSum 3 W/B 4 W/B Movie 14 Dynamic Contrast 15 Spread Spectrum 5 MTK 8202 16 Reset 6 FBE2 option 7 Pdp Logic 8 SOUND 9 YC Delay 10 Adjust HDCP Write Success.. MEMO

6-8 Samsung Electronics

7. Schematic Diagram

7-1 Circuit Description

■ SMPS Board

The SMPS used for the PDP has been designed to be efficient, compact and lightweight. For VS and VA outputs, a LLC converter has been used. For the other outputs, a Flyback converter has been used.

LOGIC Board

The logic circuit consists of a Logic Main Board and an Address Buffer Board. The Logic Main Board decodes the video signal encoded by the Video Board, outputs the ADDRESS data signal for each pattern and generates X and Y drive signals. The Address Buffer Board buffers and transfers the ADDRESS data output signal using TCP IC.

- LVDS with built-in video signal processing (W/L, error diffusion, APC, FCR, etc.) applied and 1 ASIC chip.
- Outputs the address Drive IC control and data signals to the Buffer Board.
- Outputs the control signal for the X and Y Drive Boards.
- Monitors major drive voltages (Micom Circuit Block); detects if a surge voltage has been applied and protects the Drive Circuit.
- Temperature Adaptive Operating Mode (Low Temperature/Room Temperature/High Temperature); Discharge optimization for each temperature level.

X-MAIN Board

Connects to the X terminal block, 1) provides maintaining voltage waveform (including ERC), and 2) maintains the Ve bias in the Scan section.

Y-MAIN Board

Connects to the Y terminal block, 1) provides maintaining voltage waveform (including ERC), 2) provides Y Rising, Falling Ramp waveforms, and 3) maintains the Vscan bias.

Address Buffer Board

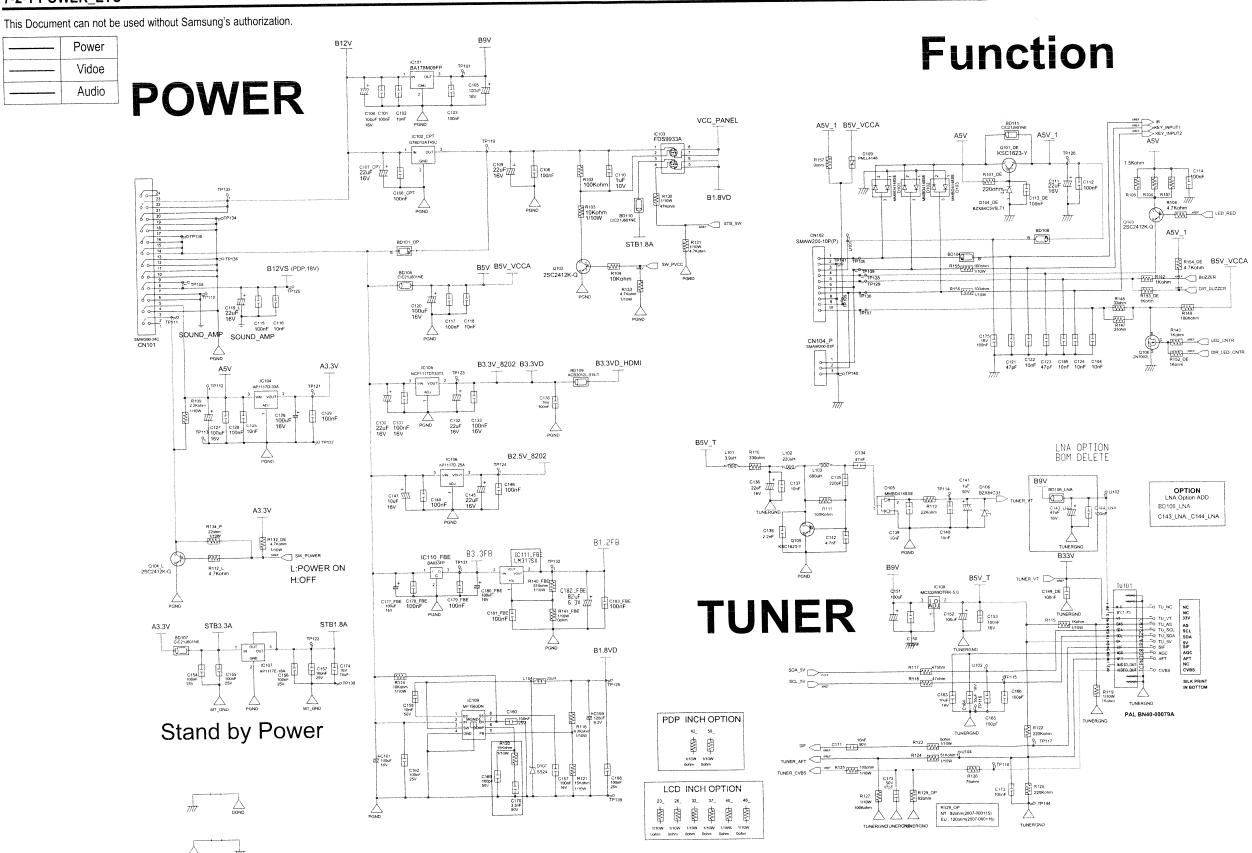

It delivers the data signal and control signal to the TCP.
